AB A class of 1-acetanilide-4-aminopyrazole-substituted quinazoline Aurora kinase inhibitors has been discovered possessing highly potent cellular activity. Continuous infusion into athymic mice bearing SW620 tumors of the soluble phosphate derivative I (R = PO₃H₂) led to dose-proportional exposure

of the des-phosphate compound I (R = H) with a high-unbound fraction. The combination of potent cell activity and high free-drug exposure led to pharmacodynamic changes in the tumor at low doses, indicative of Aurora B-kinase inhibition and a reduction in tumor volume

AB Two novel syntheses of a key 4-aminopyrazole synthetic building block (I) are described. Both routes avoid the potentially explosive precursors that were used in the previously patented route. A salt of a vinamidinium cation previously used in 5-aminopyrimidine synthesis was condensed with a protected hydrazine salt leading to a 4-aminopyrazole. Buchwald-type amination coupling has also been shown to yield the same compound

AB Title compds. represented by the formula I [wherein R1 = H or Me; X = a bond or O; and pharmaceutically acceptable salts thereof] were prepared as aurora kinase inhibitors. For example, I [R1 = Me, X = a bond] was provided in a multi-step synthesis starting from the reaction of 5,7-difluoroquinazolin-4(3H)-one with 4-anilinoquinazoline. The prepared quinazoline derivs. showed biol. activity in in vitro aurora A & B kinase inhibition test, in vitro cell phenotype and substrate phosphorylation assay, and in vitro drug-resistant cell phenotype and substrate phosphorylation assay. Thus, I and their pharmaceutical compns. are useful as aurora kinase inhibitors for the treatment of disease, in particular proliferative diseases such as cancer.

- AB Quinazoline derivs. of formula I [wherein X = O, NH or N(alkyl); R1-R4 = H, halo or alkoxy; R2 = nitro, cyano, OPO3H2; R3 = phosphonooxyalkoxy; R5 = (un)substituted (hetero)aryl; R19 = H, alkyl, acyl, amide, ester, etc.; and salts, esters or prodrugs thereof] were prepared as aurora kinase inhibitors. Thus, II was synthesized in 95% yield by condensation of the corresponding 4-chloroquinazoline derivative (preparation given) with 4-aminopyrazole derivative (preparation given). Compds. I generally showed 50% inhibition activity at the concns. of 1-1000 nM against both aurora-A and aurora-B kinases, and were active in the in vitro cell proliferation assay and in the in vitro cell cycle anal. assay at the concns. of 1 nM to 100 μ M and 1 nM to 10 μ M, resp. Also disclosed are processes for the preps. of I, pharmaceutical compns. comprising I and uses of I for the treatment of proliferative diseases such as cancer.
